SUMMARY

ISTQB® Certified Tester Foundation Level (CTFL) QA Automation Engineer with hands-on experience building end-to-end UI and API automation frameworks using Playwright (TypeScript, Python, Java) and REST Assured. I independently design and build maintainable frameworks, using OpenCode and Playwright MCP to accelerate application exploration, implementation, debugging, and code review while manually validating all AI-assisted changes.

SKILLS

Programming Languages

Java, TypeScript, JavaScript, Python

Test Automation

Playwright, Selenium WebDriver, REST Assured

API Testing

REST APIs, Postman, GraphQL, JSON

Frameworks & Patterns

Page Object Model, PageManager, Fixtures, TestNG, Pytest

CI/CD & Version Control

GitHub Actions, Git, GitHub

Testing

E2E, API, Regression, Smoke, Functional, Positive/Negative, Data-Driven Testing

Reporting & Debugging

Allure Reports, Playwright Trace Viewer, Chrome DevTools

Development Tools

Maven, Node.js, IntelliJ IDEA, VS Code, PyCharm

AI-Assisted QA & Development

OpenCode, Playwright MCP, ChatGPT, GitHub Copilot, Claude

PROFESSIONAL EXPERIENCE

QA Automation Engineer

2026 – Present

Independent QA Automation Projects

- Designed and developed UI and API automation frameworks using Playwright, REST Assured, Java, TypeScript, and Python.
- Applied AI-assisted workflows with OpenCode and Playwright MCP for application exploration, debugging, refactoring, and CI troubleshooting.
- Built GitHub Actions CI/CD pipelines with automated reporting, failure artifacts, and smoke, regression, and nightly test execution.

Sales Specialist

2017 – 2026

UAB BJARNUM

- Managed active B2B sales pipeline, supplier sourcing, and existing client relationships
- Coordinated procurement processes and identified new business opportunities across multiple product categories

Sales Specialist

2015 – 2017

UAB Statyby renovacijos sprendimai

- Handled diverse product sales across various categories in a fast-paced environment

IT Technician

2013 – 2015

UAB Servea

- Repaired printers and installed specialized software for business clients

IT Technician

2012 – 2013

UAB Comtech ir Co

- Assembled and configured computers, installed operating systems and performed hardware/software testing before delivery
- Ensured quality standards through systematic pre-delivery testing of each unit

Programmer

2009 – 2012

UAB Digimedia

- Developed and maintained game server modifications using Python and SourcePawn
- Debugged and tested custom game logic, ensuring stable and consistent player experience

PROJECTS

DPD Shipment Automation Framework — Playwright, Java [↗](#)

2026

- Built a 20-test E2E suite (5 smoke, 12 regression, 3 security) for DPD Lithuania's live shipment platform, covering login validation, shipment options, parcel locker selection, and the PUDO-to-PUDO flow up to payment.
- Selected controlled sequential execution after identifying shared account-level backend state conflicts that made parallel runs unreliable — documented the tradeoff in the project README.
- Implemented POM with PageManager, authenticated storage state, externalized test data, and JSON-driven negative scenarios.
- Integrated Maven, GitHub Actions, Allure, screenshots, traces, and retries; used OpenCode to accelerate implementation and CI troubleshooting.

DEPO E-Commerce Test Automation — Playwright, TypeScript [↗](#)

2026

- Built a 32-test Playwright/TypeScript framework (15 positive, 17 negative) covering authentication, product browsing, cart, checkout, and GraphQL API validation for a live e-commerce platform.
- Implemented Page Object Model architecture with PageManager, custom fixtures, typed test data, reusable authentication setup, and GraphQL-based cart cleanup.
- Used Playwright MCP for application exploration and locator discovery, and OpenCode for implementation, debugging, and refactoring.
- Integrated GitHub Actions, Allure reporting, and tagged/parallel execution.

LTG Link Railway Booking Automation — Playwright, Python [↗](#)

2026

- Built a 24-test suite (8 smoke, 16 regression) for LTG Link, the Lithuanian train ticket booking platform, covering authentication, route search, mobile checks, and multi-step booking flows.
- Implemented POM with PageManager, reusable date picker components, Pytest fixtures and markers, and authenticated storage state reuse.
- Added GitHub Actions nightly, smoke, and regression runs with Allure reporting, traces, videos, and retries against a live production site; used Playwright MCP selectively for flow exploration and OpenCode for debugging, refactoring, and CI troubleshooting.

E-Commerce API Test Automation — REST Assured, Java [↗](#)

2026

- Built a 17-test modular REST Assured framework (11 positive, 6 negative) for DummyJSON, covering authentication, products, search, cart, and an end-to-end cart flow.
- Specified test scenarios and API structure for AI-assisted implementation, then manually reviewed and validated all generated tests.
- Implemented request/response DTOs, reusable API and configuration layers, dynamic test data, and soft assertions for comprehensive response validation.
- Configured TestNG, Maven, Allure, and GitHub Actions.

EDUCATION

Manual & Automation Software Testing (160h)

2024 – 2025

Vilnius Coding School [↗](#)

Training covering manual testing fundamentals, test case creation, and bug reporting workflows. The program included extensive hands-on practice in Java-based test automation using Selenium WebDriver, with focus on building and executing automated tests.

CERTIFICATIONS & TRAINING

ISTQB Certified Tester Foundation Level (CTFL) [↗](#)

07/2026

LTSTQB® - Lithuanian Software Testing Qualifications Board

Playwright with Python - Web & API Testing [↗](#)
